

ACE-BASS 2 – A bulls eye

SWEDEN: Hifi & Musik, no 6 2004

“From what we have listened, Audio Pro has managed very well with their vision of making a small subwoofer which plays a tight, rapid and extremely deep bass.”

”This subwoofer is as different as it is unusual, but the four hyper strong 5 1/2” woofers will perform bass like a 10”. To their aid they have a 10” passive radiator. The passive radiator is aimed forward, while the powered woofers are placed in pairs on each side of the cabinet.”

“This subwoofer is nothing else but a bulls eye. It can be used in all imaginable ways. It will make a good hifi-system even better, it can be used in a home theater system or together with smaller satellites or monitors. Due to its quick response, it will handle all these connections capitally. It has the depth and power to upgrade any large and expensive sound system.”
