

## Black Diamond V.2 - Big sound

NORWAY: Fidelity, no 6 2004

**"These loudspeakers gets you hooked from the first moment, they impress with a large tone quality sound image. They have both height and breadth - and not the least - a feeling of depth behind and between the speakers."**

"I think Black Diamond, in many ways, sounds quite like they look - elegant in manifestation. There is a great amount of lustre and a good lingering note from both piano and acoustic guitars, something that also contributes to create a fine connection to the room. This is a speaker that triggers acute activity in my stiff leg, (earlier known as the rock foot!). There is good punch and sound pressure in the mid-range area - despite of a certain box resonance when the level control passes the equator on its global journey - and combined with its transient willingness it even fits the more powerful, electrically based music forms, such as rock, and the related words, that this music form expresses."

"It delivers the music with steady rhythm and rhythmical intensity with fast transients covering the entire frequency area."

"I can only agree with the American group Kiss and sing along at the top of my voice: Ooooooh, Black Diamond! Audio Pro has, according to my opinion, succeeded in refining an already successful product. Black Diamond V.2 offers you a lot for your money, and is a pleasure for both the eye and the ear."
