

Black Diamond V.2 - Innovative at a surprising price

SPAIN: On Off, no 158 2005

“Audio Pro is one of very few companies that show an unflinching passion for exhibiting the originality and sophistication of their technological solutions in extremely affordable products.”

“Indeed, their active subwoofers are in a class of their own within their category, thanks to a series of innovations that enable them to deliver compact, opulent basses from really small cabinets.”

“The Black Diamond V2 follows a similar line: a beautifully designed column in classical lines provides the framework for such interesting concepts as a mechanical bass equalizer (located at the bottom of the cabinet) which enables the bass response to be extended down to less than 30 Hz, a significant achievement for such an affordable speaker.”

“The construction quality is outstanding - something that has become a constant of Audio Pro’s designs, and the speaker cones used guarantee a high level of subjective performance (both in music and in cinema), even when operating at high sound pressure levels.”

“Another feature of the Black Diamond V2 (whose range companions in an audiovisual system would be the Black Pearl V2 compact monitor and the Black Vector V2 central speaker) is that its geometry enables it to blend easily in any setting, without this implying any problem in terms of extending the bass response. On the other hand, a minimalist topology filter guarantees a very balanced frequency response curve and an easy “attackability.”

STANDS OUT FOR...

- Impressive bass response
- Ease of location
- Very competitive price

NEEDS IMPROVING...

- Slightly coloured middle range at high volume levels
