

Black Diamond V.2

Sweden's biggest hifi-success story in new guise

SWEDEN: HiFi & Musik, no 6 2004

"It's time for Black Diamond v.2, which to its principle and armament is just like it's predecessor. When scrutinizing, you will find that almost nothing is the same!"

"The tweeter is one of the major improvements of Black Diamond v.2. The 1" dome sits in its own aluminium die-cast plate, and plays in a so called double chamber. It is floatingly attached to the cabinet but it is still 100%-fixated."

"One of the more visible improvements of the v.2 is the steady foot and the spreading lens which the bass reflex plays against."

"A fantastic speaker in its time has, with other words, become even better. ... No, for this money, there is nothing more to wish for. You simply get detail, crispness, homogeneity and deep bass as if it would be a much more expensive (and larger) speaker."
